

Cancer and Society in the 21st Century

Call for Interview Participants

What is the research about?

Recent developments in cancer research have led to the introduction of new tests to detect and screen for cancer, and the potential for treatments to be more tailored to individual patients. Patients are more involved in cancer research, for example in clinical trials or advising on how cancer services are delivered. Our research explores what these developments mean for people with cancer as well as those around them.

Have you or a family member/friend been approached about the 100,000 Genomes Project for cancer?

We would like to hear from you –

- If you or your family member/friend have taken part in the 100,000 Genomes Project
- If you or your family member/ friend have been asked to take part in the 100,000 Genomes Project but have decided not to be involved.

We would like to talk to you for 30-60 minutes, face-to-face or over the telephone.

Please contact us for more details:
